AI Governance & Safety | Certified AI Auditor (FHCA) | EU AI Act | Bridging Enterprise Digital Transformation & AI Risk

PROFESSIONAL SUMMARY

Responsible AI & AI Governance Leader with 23+ years 29 projects 55 countries of global digital transformation experience across manufacturing, pharma, supply chain, and high-compliance industries.

Proven track record in designing enterprise operating models, governance structures, and risk-controlled environments that enable organizations to scale AI safely, ethically, and effectively.

Experienced in leading enterprise AI/ML enablement and Factory Digitalization programs from strategy through deployment, integrating **MLOps, DevOps**, and **data governance** practices to ensure model lifecycle control, traceability, and operational accountability. Designed AI maturity frameworks, transformation roadmaps, and cross-functional governance forums to align AI initiatives with business value, risk appetite, and regulatory expectations.

Certified in EU AI Act and Independent AI System Audit, with strong understanding of risk-based AI controls, audit readiness, and Responsible AI principles including transparency, explainability, data integrity, and human oversight. Adept at working with senior stakeholders to translate complex AI concepts into practical governance, operating models, and scalable enterprise solutions.

Recognized for building structured, repeatable delivery systems that transform AI from isolated pilots into trusted, production-ready capabilities.

CORE CAPABILITIES

Responsible AI & Governance

• Risk identification & controls • Audit readiness
Responsible AI implementation (fair, transparent, explainable human oversight)
• EU AI Act alignment
• AI maturity assessment & transformation roadmaps

AI Systems & Risk-Aware Engineering

• MLOps & model lifecycle governance
• Enterprise LLM / Generative AI integration
Agentic AI control frameworks • Model evaluation & validation
• ML security, adversarial risk & prompt risk considerations

Enterprise Transformation & Delivery

• Digital operating models
• Cross-functional governance
Stakeholder alignment across IT, business & compliance
• Agile / DevOps environments
• Data governance for AI & analytics

Technical Foundations

• Python
• Machine Learning
• Deep Learning
• Natural Language Processing
• Prompt Engineering
• Cloud AI Platforms (AWS)
• Data Engineering Concepts
• SAP Data & Process Integration

PROFILE

AI Governance & Responsible AI Leadership Profile
AI governance and Responsible AI leader designing enterprise AI operating models, risk controls, and governance structures for safe, transparent, and regulation-aligned AI adoption. Bridges technical AI understanding with executive oversight, translating model, generative AI, and deployment risks into structured governance, decision forums, and audit-ready practices. Experienced in enabling AI adoption across complex, multi-country environments through governance-led transformation.

PROJECT EXPERIENCE

Seagate – APAC / EMEA / North America Oct'20 - present
Factory Digitalization planning transformation Lead
. Successfully led digital transformation planning from Oracle to **S/4 HANA** in procurement, mass production and supply forecast.
. Delivered project planning for **AI/ML** initiatives in **HAMR** product lines → accelerate 15% AI / ML implementation.

KPMG – China Japan Korea Philippine Singapore Feb – Oct'20
Digital Data Transformation Lead in **Dole**
Digitalized data migration in soil / harvest / fresh / package product successfully streamlines product lines → reduce 30% dead stock.

Orica – APAC / EMEA / Latin & North America Oct'17 – Jan'20
Digital Data Management Lead
Design Deliver Product Lifecycle data migration & communication for manufacturing data → achieved 100% single source of truth.

L'OREAL travel retail **–** APAC Apr – Sep'17
Optimized supply chain management for 32 LUXE Brands in 50 subsidiaries via One Book dashboard → accelerate New Product Launching by **30%**

Johnson & Johnson – APAC Sep'15 – Mar'17
Logistics and Agile Project Manager
. Integrated Janssen – KPIS Agency to fulfilled 100% track & trace pharma compliance for drugs distribution. Deliver drug / narcotics track & trace interface for JSC – Pharmaceutical & Medical Devices Agency (PMDA)

Digital Transformation project across industry Mar'00 – Agt'15

Artificial Intelligence Governance, Safety & Systems Engineering

Urielle-AI — **AI Governance & Safety Initiative –** Dec'25 to present

Founder Responsible AI, Governance & AI Risk Advisory **-** https://urielle-ai.com

Urielle-AI is an independent AI governance and safety initiative focused on **human impact, systemic risk, and real-world failure modes of modern AI systems**. The work operates at the intersection of AI assurance, policy, and deployment, translating complex technical and ethical risks into **regulator-ready, board-level, and operationally actionable guidance**.

Focuses on how AI systems fail in practice — technically, socially, and operationally — and how organizations can scale AI in ways that are **trustworthy, controlled, and aligned with Responsible AI principles and regulatory expectations**.

Core Focus Areas

- AI governance frameworks & audit readiness for real-world AI systems
- GenAI risk, misuse scenarios, and adversarial failure-mode analysis
- Alignment with Responsible AI principles and **EU AI Act** requirements
- Human impact, safety trade-offs, and systemic risk in enterprise AI adoption
- Translating AI risk into enterprise governance and decision-making structures

Key Contributions

- Publish ongoing analysis and thought leadership on AI governance, safety, and accountability for practitioners and decision-makers
- Analyze AI incidents and system failures through **human-centered risk** and adversarial systems perspectives
- Support organizations in moving beyond checklist compliance toward **practical, risk-based AI governance approaches**
- Develop narrative and visual frameworks to make AI assurance, transparency, and accountability accessible to non-technical stakeholders

Featured Initiatives

Urielle-AI Blog — Research-driven insights on AI governance, human impact, and AI failure modes

AI-Thara — Visual and narrative storytelling platform that communicates AI assurance, transparency, and accountability concepts to broader audiences

Independent AI Practitioner – Jan'21 to Present

AI Governance, Agentic Systems & Predictive Modeling - https://wholidi.github.io/

Hands-on AI practitioner working at the intersection of **AI governance, agentic AI systems, and predictive modeling**, with a strong focus on real-world implementation, experimentation, and open-source system development. Designs and deploys working AI systems that operationalize Responsible AI principles, bridge governance, security, and production-grade AI engineering.

AI Audit & Governance

- Deployed **AI Verify** on AWS EC2 to evaluate ML models against fairness, transparency, and EU AI Act–aligned Responsible AI principles
- Implemented evaluation workflows to support model validation, documentation, and governance-oriented assessment

Agentic AI Systems

- Designed and deployed LLM-driven assistants and **AutoGPT-based agentic workflows** integrating external APIs and tool usage
- Explored practical control, reliability, and oversight challenges in autonomous AI task execution

GenAI Security & Risk Engineering

- Built a **multi-agent LLM × application security pipeline** for automated code risk detection, classification, and reporting
- Focused on adversarial misuse, prompt risks, and secure integration of GenAI into software development processes

Predictive Modeling

- Developed stock trend classification models using OHLCV data, technical indicators, and ML approaches including LSTM extensions
- Emphasized model experimentation, feature engineering, and applied ML pipelines

---

Selected Independent Projects

Project Portfolio: https://wholidi.github.io/ai/

- **AI Verify (AWS Deployment)** – Responsible AI model validation and governance testing environment
- **GenAI Multi-Agent Security Scanner** – End-to-end AI-driven code risk scanning, orchestration, APIs, and reporting
- **Agentic Automation (AutoGPT)** – Autonomous task execution frameworks on AWS EC2
- **Momentum & Trend Trading Models** – ML-based classifiers inspired by Minervini and PowerX strategies
- **PDF-to-Audiobook Tool** – CLI pipeline for document processing, chapterization, and metadata handling

Seagate Technology | APAC, EMEA, North America | Dec 2020 – Present

Factory Planning Digital Transformation Lead (AI Enablement Context)

Global role across APJ, EMEA & North America | 14 countries | 4000+ users

Led large-scale factory planning digital transformation and Factory Digitalization & Intelligence (FDI) program coordination within Seagate's global Rethink initiative, integrating operational systems, business process automation, and AI/ML program planning across manufacturing environments.

Enterprise Transformation & Operational Systems

- Successfully led Oracle → S/4HANA digital supply chain planning transformation across 14 countries
- Implemented S/4HANA-based business process automation for factory procurement planning, enabling automated reporting and proposal generation for business review and approval
- Managed global delivery footprint (330 RICEF objects) supporting complex, multi-country planning operations

---

AI Program Planning, Enablement & Governance Support

- Led planning and execution coordination for Factory Digitalization & Intelligence initiatives, supporting AI/ML adoption in HAMR programs through structured governance, risk tracking, and status transparency (↑20% improvement in alignment and visibility)
- Designed resource planning, budgeting, and deployment roadmaps linking AI experimentation efforts to production environments, ensuring controlled and operationally aligned rollout

---

AI-Enabled Operational Decision Systems

- Supported integration of AI-driven decision support and generative AI assistant initiatives into operational workflows
- Contributed to internal AI assistant programs (e.g., Seagate Copilot Hub) to embed AI tools into daily business processes
- Enabled data-driven planning and procurement automation through analytics integration and business process optimization

---

AI Safety & Governance Editorial Leadership (Independent)

- Provide expert analysis and editorial review on AI safety, governance, and audit practices, with focus on agentic AI risk and oversight frameworks
- Collaborate with industry and policy experts to translate AI governance frameworks (EU AI Act, NIST AI RMF, PDPA) into practical organizational controls
- Deliver ongoing insights on AI model assurance, trust calibration, and responsible deployment of advanced AI systems

CERTIFICATIONS & PROFESSIONAL DEVELOPMENT

Credential Verification: https://wholidi.github.io/skills

AI Portfolio: https://wholidi.github.io/ai/

AI Governance & Responsible AI

- For Humanity Certified Auditor (FHCA) — EU AI Act
- AI Ethics & Responsible AI (SAP Generative AI / AI Ethics)
- Securing Generative AI & ML Security

AI Systems & Engineering

- Machine Learning Engineering (MLOps for Production)
- Deep Learning (TensorFlow)
- Generative AI Strategy & Adoption

Leadership & Enterprise Delivery

- Professional Scrum Product Owner
- AWS Cloud Practitioner
- DevOps Foundations
